Feed your turf with precision

MICRO PRILLED UREA 46-0-0 Greens Grade

Total Nitrogen (N)	46.0% (min)
Bulk Density (comp.)	45 lbs/ft ³ (720 kg/m ³)
Angle of Repose	25°
Size Guide Number	120-160

High Nitrogen Content

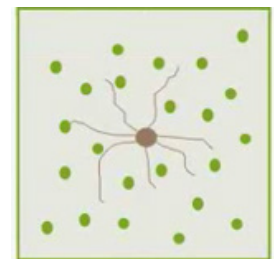

Micro Prilled Urea offers a high nitrogen content for delivering the nutrient that is required in large amounts compared to other nutrients while maximizing cost per unit of nitrogen for turf to thrive. Nitrogen is important for many plant physiological processes in turf and is used in the formation of proteins and stimulating new green growth.

Precision Coverage

Micro Prilled Urea SGN ranges from 120-160 and offers precise and thorough coverage compared to larger prilled products. Turf management requires precision applications with product availability for each individual plant for consistent release without noticeable variations in color.

Dual Application Methods

Urea is highly soluble and can be applied as a topdress or foliar application. Urea is compatible with many products commonly applied on turf and offers cost savings compared to liquid urea products.

Smaller SGN for more prills per sq. ft.
