**YaraLiva®**  
More than calcium nitrate

Looking for a nitrogen source? Look no further.

## YaraLiva CN-9 and CAN-17: nutrition readily available through fertigation or soil applied

**YaraLiva Calcium Nitrate** fertilizers have a high nitrate content, the preferred nitrogen source by most crops. The calcium in YaraLiva is 100% water-soluble and readily available for uptake. The synergies between nitrate N and calcium enable a fast and predictable growth response making YaraLiva a very reliable nitrogen source.

YaraLiva CN-9 and CAN-17 are ideal for fertigation applications via low volume or furrow irrigation, with easy calibration. In addition, they are highly mixable with other nutrient sources.

### **YaraLiva® CN-9®**

9% Total Nitrogen (N)

- 0.58% Ammoniacal N

- 8.42% Nitrate N

11% Calcium (Ca)
