YaraVita
PROCOTE[®]
Micronutrient Fertilizer Coatings

DON'T THINK EVEN DISTRIBUTION IS IMPORTANT?

TRY GIVING ONLY ONE KID A PIECE OF CAKE.

When it comes to feeding your crop, **coverage matters**. That's why YaraVita PROCOTE is changing the game.

Unlike traditional blends that can segregate and settle - leaving some plants short - PROCOTE is a coating that covers every granule of your dry fertilizer with micronutrients. That means **even distribution across your entire field**, and every plant gets what it needs.

Here's why PROCOTE works better:

- ✓ **Uniform coverage:** micronutrients reach every plant, not just a lucky few
- ✓ **No segregation or dust-off:** thanks to proprietary suspension technology
- ✓ **Efficient application:** only ounces per acre, not pounds like with blends
- ✓ **Improved nutrient uptake:** more feeding sites, better root development
- ✓ **Higher yield and ROI:** backed by field data and grower reviews

Don't let uneven blends limit your crop's potential. With PROCOTE, less is more - and smarter.

Still not convinced? Try giving only one kid a piece of cake.
