YaraLiva[®]
More than calcium nitrate

Suit Up for Storage

- Strength building calcium
- Predictable, fast-acting nitrate nitrogen
- Future proof low carbon footprint

Potatoes prefer nitrate nitrogen. Nitrate is mobile in the soil, making it **readily available for uptake** by the relatively shallow potato's root system. No need to wait for a conversion process like with urea or ammonium-based fertilizers.

Nitrate nitrogen is fast-acting and predictable, ensuring there are **no late-season flare-ups of unwanted nitrogen** that can occur with other N forms.

Give your potatoes the reliability they need to thrive - from field to storage with YaraLiva Calcium Nitrate.

Protect your ROI with YaraLiva
