# YaraLiva®

Calcium Nitrate

## 9 OUT OF 10 PLANTS PREFER NITRATE-N. THE 10<sup>TH</sup> IS A WEED.

When it comes to crop nutrition, **not all nitrogen is created equal.**

**YaraLiva® Calcium Nitrate** fertilizers deliver nitrate nitrogen - the most efficient and immediately available form of nitrogen for plants.

Here's why it matters:

✓ Fast Uptake, Fast Growth

Nitrate nitrogen is immediately absorbed by the roots, providing crops with nitrogen when they need it, not when they don't.

✓ No Energy Wasted

Unlike ammonium or urea, nitrate is immediately available to the plant, saving energy and speeding up development.

✓ Better Root Development

Nitrate encourages deeper, stronger roots, helping crops access water and nutrients more effectively.

✓ Balanced Nutrition

YaraLiva combines nitrate nitrogen with soluble calcium, promoting strong cell walls and better fruit quality.

✓ Increased Plant Safety and Soil Health

Nitrate delivers essential nitrogen to your crop with less risk of root injury or impact on soil pH, making it safer for long-term soil health.

YaraLiva gives your crops the clean, powerful nitrogen they need to thrive.
