YaraVita PROCOTE®
Micronutrient Fertilizer Coatings

Cover Your Odds with YaraVita PROCOTE Micronutrient Coatings

Most micronutrient coatings use granular mixtures to deliver nutrition to crops, which can lead to uneven distribution in the field and product loss.

YaraVita PROCOTE isn't most micronutrient coatings. Instead, YaraVita PROCOTE uses a revolutionary oil-based coating to **deliver B, Cu, Mn and Zn evenly and optimally across the entire field**. With YaraVita PROCOTE, you get 30% more feeding sites per granule for better nutrient uptake and improved crop health.

The oil-based coating also eliminates dust by 99%, so you get every drop of nutrition you pay for.

Learn more about YaraVita PROCOTE's proven performance, specific yield results and more.
