YaraVita
PROCOTE[®]
Micronutrient Fertilizer Coatings

MICRONUTRIENTS. MACRO IMPACT.

Think your crop is doing fine? Think again. Plant demand for micronutrients may be tiny, but their impact is mighty when it comes to boosting yield, quality, and plant health.

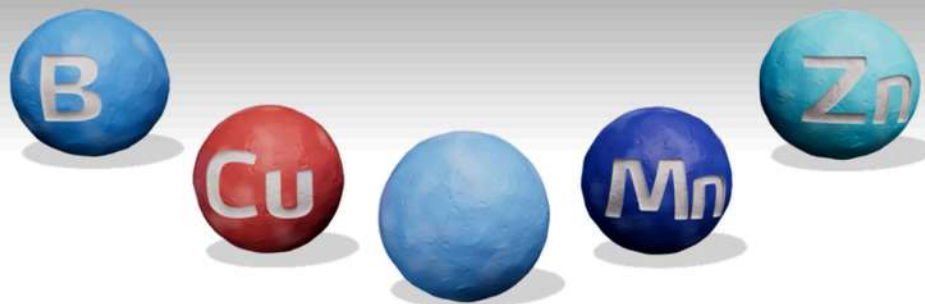

Balanced nutrition means more than just nitrogen. Without the right mix - including essential micros - your crop could be missing out on root strength, water efficiency, and canopy health.

Don't let your micros limit your macros. YaraVita PROCOTE makes it easy to coat your dry fertilizer with the micros your crop craves - no extra hassle, just better results.

Ready to grow smarter?

Add micronutrients to your fertility program and watch your yield grow.
