YaraVita PROCOTE®
Micronutrient Fertilizer Coatings

Say Goodbye to Dust and Product Loss

The thing about powdered micronutrient coatings is that they don't really coat the way you need them to. The composition leads to messy applications, segregation, product loss and uneven nutrient distribution in the field.

YaraVita PROCOTE eliminates 99% of dust and segregation by using a revolutionary oil-based micronutrient coating to deliver B, Cu, Mn and Zn evenly and optimally, ensuring you get all the nutrition you pay for, and your crops get uniform nutrition across the entire field.

Compared to YaraVita PROCOTE, the competition's powdered micronutrients are just dust in the wind.
