YaraVita[®] PROCOTE[™] BCMZ

Oil based suspension concentrate with B, Cu, Mn and Zn for fertilizer coating.

Typical Analysis	
Boron (B)	3.6% (nutrient content per gallon - 8 oz B)
Copper (Cu)	6.0% (nutrient content per gallon - 13 oz Cu)
Manganese (Mn)	6.0% (nutrient content per gallon - 13 oz Mn)
Zinc (Zn)	12.0% (nutrient content per gallon - 27 oz Zn)
Appearance	Brown oil based suspension concentrate

The information provided is accurate to the best of Yara's knowledge and belief. Any recommendations are meant as a guide and must be adapted to suit local conditions.

Feed the plant and not the soil

YaraVita PROCOTE BCMZ supplies micronutrients on all fertilizer particles to ensure micronutrients come into contact with all turfgrass roots. Healthy turf consists of many individual plants making it difficult to supply micronutrients by using blended fertilizers. YaraVita PROCOTE BCMZ is coated onto each particle allowing the plant to come in contact with the right amount of micronutrients for sustaining turf at full growth potential.

Benefits

- Superior micronutrient delivery system.
- All nutrients supplied on each particle making it homogeneous.
- Prevents waste and eliminates dust.
- Efficiently feeds turf for producing consistent and healthy turf growth.

Fertilizer coated with YaraVita PROCOTE BCMZ provides micronutrients on all particles, therefore enhancing uptake potential.

Typical micronutrient blend with spatial separation of micronutrients represented by the red dots; this is clearly not an efficient way to deliver micronutrients to all of the individual plants.
