

# YaraVita PROCOTE Micronutrient Fertilizer Coatings

**Knowledge grows**

**SUGGESTED COPY FOR WEBSITES**

## **Cover Your Odds**

YaraVita PROCOTE is a dealer-applied proprietary micronutrient fertilizer coating that leverages the granular fertilizer to evenly and efficiently distribute essential micronutrients to growing crops. With YaraVita PROCOTE a farmer's dry fertilizer program becomes the platform to deliver complete nutrition without complexity. YaraVita PROCOTE is available in Boron, Copper, Manganese, Zinc and blends of BCMZ and BMZ.

## **Improved Return on Investment and Yield**

Growing the best possible crop requires micronutrients. Across most regions and crops, applying YaraVita PROCOTE has resulted in higher yields and even better return on investment.

## **Better Nutrient Uptake**

Thanks to YaraVita PROCOTE's consistent and even distribution through the coating technology, crops have an increase in feeding sites and nutrient accessibility. With the increase in uptake efficiency, the micronutrients are only needed in grams/ac.

## **Improved Operations and Fertilizer Handling**

YaraVita PROCOTE decreases granular fertilizer dust by over 99%. Other micronutrient coating technologies rely on micronutrient powders which can result in significant micronutrient loss due to dust off and segregation. YaraVita PROCOTE micronutrient fertilizer products offer superior solution using the proprietary suspension technology, eliminating loss and dust, while improving handling.

## **Promote Water Use Efficiency**

Micronutrients provided by YaraVita PROCOTE aid in the early development of root systems, improving the roots' ability to explore nutrients and water.
