YaraVita PROCOTE®

Micronutrient Fertilizer Coatings

MAXIMIZE EVERY DROP.
EVEN IN DROUGHT.

In a season with just 15% of average rainfall, trials at the Yara Incubator Farm showed that crops treated with **YaraVita PROCOTE accessed deeper soil moisture** earlier and used significantly more of the available water than standard practices.

 **Wheat: +12% water use**

 **Canola: +18% water use**

YaraVita PROCOTE **supports earlier root development**, helping plants reach water reserves faster and stay cooler under stress.

When every drop counts, complete nutrition makes the difference.

Read more about water use efficiency with YaraVita PROCOTE [here](#).
